

FireFly ProSlab 155 Operator and Maintenance Training

As a manufacturer of precision machines, we understand the importance of operator training as it relates to machine efficiency. We are pleased to announce intermediate training classes for ProSlab 155 operators, which will include both hands-on exercises and written course material. This training will **increase the confidence of your operators, boost overall production and quality of your sod, and reduce unscheduled downtime.**

Training Overview

- 1. Operating the ProSlab 155 with quality and efficiency in mind:** This module will cover standard operating procedures, advanced procedures for better-looking pallets, equipment control locations and screen orientation, and on-the-fly adjustments for ever-changing conditions in the field.
- 2. Daily checks and maintenance:** In this module, we'll cover what should be checked and how often, knowing and keeping an eye on your wear items, and early issue indicators to aid the operator in being proactive and preventing catastrophic events.
- 3. Troubleshooting:** The goal with this module is to inform operators of the proper troubleshooting procedures when a fault appears. Students will be instructed on how to properly gather facts in the case a technician is needed.
